

PHASE 6 – PROJECT TESTING

Project: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Testing Objective

Testing verifies the documented workflow from placing the Standard Laptop request through approval and checking the resulting Catalog Task.

Test Flow

Standard Laptop -> Order Now -> Request Number -> Approvers -> Requested Item -> Approve -> Catalog Tasks -> Open task -> Verify status, short description, and assigned group.

Test Case 1 - Catalog Item

Open Service Catalog, select Hardware, and locate Standard Laptop. Expected result: the Standard Laptop item is available for ordering.

Test Case 2 - Request

Click Order Now. Expected result: a Standard Laptop request is placed and an order status/request number is available.

Test Case 3 - Approval

Open the Request Number and review the Approvers/Requested Item information. Complete the documented approval step. Expected result: the request can progress to the fulfillment stage.

Test Case 4 - Catalog Task

Open the Requested Item and navigate to Catalog Tasks. Expected result: the resulting Catalog Task is available for inspection.

Verification Points

Verify task status, short description, description, and that the assigned group is Hardware. These fields demonstrate that the configured Create Catalog Task action produced the intended result.

Testing Result and Conclusion

The testing phase is successful when the Standard Laptop request reaches the expected stage and the automatically created Catalog Task contains the documented configuration details and Hardware assignment.
