

PHASE 1 – BRAINSTORMING & IDEATION

Project: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Project Idea

The project focuses on streamlining the standard laptop procurement process in an IT department by using ServiceNow Flow Designer. The central idea is to automate the configuration-task creation that follows an approved Standard Laptop request. Instead of depending on a team member to manually create and route the task, the workflow performs this activity automatically.

Problem Statement

The current process can involve manual handling after a laptop request is submitted and approved. The configuration step may be delayed or overlooked, increasing user waiting time and creating additional work for the IT team. Manual task creation can also lead to inconsistent assignment and unnecessary follow-up.

Proposed Solution

Create a ServiceNow Flow Designer flow called Standard Laptop Task. The flow uses the Service Catalog process and creates a Catalog Task for the approved request. The task contains the laptop configuration description and is assigned to the Hardware group.

Objectives

- Create a seamless process for Standard Laptop requests.
- Ensure timely configuration after approval.
- Reduce manual intervention and possible errors.
- Improve task allocation to the Hardware team.
- Reduce user waiting time.
- Improve IT procurement efficiency and productivity.

Initial Workflow

Standard Laptop request -> Approval -> Approved request -> Flow Designer -> Create Catalog Task -> Assign to Hardware -> Laptop configuration.

Expected Outcome

The required configuration task is generated and assigned automatically after approval. The requester receives a more consistent fulfillment process and the Hardware team receives a clearly defined task.

Conclusion

This phase establishes the project direction: automate the Standard Laptop procurement and configuration workflow using ServiceNow Flow Designer.
