

PHASE 3 – PROJECT DESIGN

Project: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Design Objective

The design connects the Service Catalog request, approval process, Flow Designer automation, and Catalog Task assigned to the Hardware group.

System Workflow

The user selects Standard Laptop and places an order. A Requested Item is created and processed through approval. The Service Catalog process supplies the flow context. The flow uses Create Catalog Task, adds the required configuration information, and assigns the task to Hardware.

Flow Configuration Design

Flow Name: Standard Laptop Task

Application: Global

Run As: System User

Trigger: Service Catalog

Action: Create Catalog Task

Request Item: Requested Item Record

Short Description: Laptop need to Configured

Description: Laptop need to Configured

Assignment Group: Hardware

Workflow Representation

Standard Laptop Request -> Approval -> Approved -> Flow Designer Trigger -> Create Catalog Task -> Hardware Assignment -> Laptop Configuration.

Service Catalog Design

The Standard Laptop service is available under the Hardware section of Service Catalog. The user selects the item and uses Order Now to place the request.

Task Design

The Catalog Task gives the Hardware team a clear configuration task after approval. The task carries the required description and Hardware assignment.

Design Outcome

The design provides a direct connection between the user's laptop request and the Hardware team's configuration task, supporting reduced manual intervention and improved allocation.

Conclusion

The design phase defines the workflow, trigger, action, task fields, assignment group, and Service Catalog interaction required for the project.
