

PHASE 5 – PROJECT DEVELOPMENT

Project: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Development Objective

The development phase implements the Standard Laptop procurement automation in ServiceNow using Flow Designer, Maintain Items, and Service Catalog.

Milestone 1 - Flow Creation

Open ServiceNow and Flow Designer under Process Automation. Create a new flow named Standard Laptop Task. Set Application to Global and Run As to System User. Add Service Catalog as the trigger. Under Actions, select Create Catalog Task and map the Requested Item Record to the request item.

Task Configuration

Set the short description to 'Laptop need to Configured'. Add the Description field with the same value. Set Assignment Group to Hardware and Approval to Approved. Leave the remaining fields at their required/default settings, save the flow, and activate it.

Milestone 2 - Flow Assignment

Open Maintain Items and locate the Standard Laptop record. Open the Process Engine section, configure the item to use the created Standard Laptop Task flow, and save the record.

Milestone 3 - Service Catalog

Open Service Catalog, select Hardware, locate Standard Laptop, and click Order Now. Open the order/request record, review the Approvers section and Requested Item, and complete the documented approval step.

Verification During Development

Open the Requested Item and scroll to Catalog Tasks. Open the created task and verify its status, short description, description, and Hardware assignment.

Development Result

The implementation connects an approved Standard Laptop request to an automatically generated Catalog Task for the Hardware team.

Conclusion

The development phase converts the project design into the working ServiceNow automation required by the project.
